Abstract of the Disclosure

~~This invention provides a~~ A contact lens selling system which ~~can retain the safety~~ maintains the security of the contact lens information at all ~~hours~~ times. The contact lens selling system ~~is comprised of~~ includes a communication network and ~~plurality of first, second, and third~~ information processing apparatuses connected through the communication network to contact lens sellers, users, and ophthalmology examining departments, respectively. ~~Plurality of information processing apparatuses are comprised of at least one of a first information processing apparatus, a second information processing apparatus and a third information processing apparatus.~~ The ~~transmitting/receiving means~~ transmitter/receiver of the first information processing apparatus ~~is a means for transferring~~ apparatuses transfers information on the registration number, specified department of ophthalmology, contact lens price, and the money paying deadline to the second information processing ~~apparatus~~ apparatuses, and ~~is a means for transferring~~ information on registration number and name to the third information processing ~~apparatus~~ apparatuses. The ~~transmitting/receiving means~~ transmitter/receiver of the second information processing ~~apparatus~~ apparatuses ~~is a means for transferring~~ apparatuses transfers information on ~~the~~ a contract application to the first information processing ~~apparatus~~ apparatuses. The ~~transceiver means of the third information processing apparatus is a means for, transferring information on~~ apparatuses transfer registration number, name, selling date, contact lens information, and eyeball diagnosis information only to the first information processing ~~apparatus~~ apparatuses.
